For Use on Established Alfalfa grown for seed Only

Apply a surface broadcast application with ground application equipment prior to weed emergence. Use 2.65 - 3.33 pints (2.5 to 3.2 lbs. ai) per acre on coarse and medium soils in a minimum of 20 gallons of water per acre. Apply Dual MAGNUM to the soil and incorporate uniformly into the top 3 inches of soil by cross-tillage (twice over field). For best incorporation, cross-tillage is desirable for maximizing distribution.

Precautions: Crop injury may result under unfavorable environmental conditions. **DO NOT** feed or graze alfalfa forage or fodder. **DO NOT** cut alfalfa for hay or forage. Seeds from treated fields may not be used for sprouts. No portion of the treated field, including seed, seed screenings, hay, forage or stubble may be used for human or animal consumption.

Producers of alfalfa seed who use this product are required to inform, in writing, conditioners receiving seed produced on fields treated with this product that the seed was produced on fields treated with Dual MAGNUM. A copy of this labeling is required to be provided to the conditioner by the producer. Processed seed must be labeled "Not for human or animal consumption" at the processing plant. The processor must dispose of all seed screenings in such a way that they cannot be distributed or used for food or feed.
